gEHRiMed™ named ‘App of the Month’ by Nuance

ASHEVILLE, NC – gEHRiMed™, an electronic health record designed specifically for use in the long-term care environment, has been selected “App of the Month” by Nuance, a leading provider of voice and language systems for the healthcare industry.

Created by the physicians of Geriatric Practice Management (GPM), gEHRiMed™ is a completely portable, web-based EHR that allows providers to meet the unique challenges of caring for patients in multiple LTC locations, instead of an office-based environment with administrative staff support.

The gEHRiMed™ app blends touch-screen menus and the iPad’s functionality with voice-recognition technology to capture patient data and create and distribute a complete and compliant medical note.

“We understand what it means to work in the long-term care setting, and with our app we’ve created a tool to help physicians do their work effectively and efficiently,” said Michael Healey, Chief Technology Officer for GPM. “We’re pleased that Nuance is highlighting gEHRiMed™ and its ability to do accurate, real-time data capture.”
